# Magento CE: Setup and showcase of an E-commerce

Abstract:
This poster gives a general overview of a project with the aim to set up and showcase an e-commerce system. Magento CE was used for this. The project also used two extensions namely, *beeTailer* and *mSemantic*, which are free for download at the magento extensions marketplace. The first of these extensions allowed us to incorporate aspects of social semantic web into the e-store. The later attaches RDFa tag / metadata to the e-store to publish it on an online vocabulary and make it discoverable in the Semantic Web. *Magento DB Publisher*, a java implementation of d2rq that we did enables the e-store Administrator to export the relational database used by Magento into RDF from where it can either be viewed as HTML or RDF or queried over a SPARQL endpoint.

This poster is presented as a partial fulfilment of a lab module MA-INF3232-Lab by:

mSemantic   beetailer

Both extensions freely available from Magento Connect

Magento DB Publisher

File About

Magento DB Publisher → universitätbonn

Explore Products

- Visit **goo.gl/uuLgg8** Or the facebook page of the webstore **goo.gl/0ulKIo**
- If you already have an account with the webstore, go to the "Login Front" activity. If not, try out the "Create an Account" task.

How to Use

- Give permissions to the executable file on Linux (sudo chmod a+x magentodbpublisher.jar) and run the program
- Introduce the required data: Database Name, MySQL Credentials (Username/Password) and Server port to publish
- Press "Generate" button to start the publication process
- DONE! Now you can access the Magento DB as virtual, read-only RDF graphs

Database Settings

Database Name: magento

DB Username: root

DB Password: root

Server port: 2020

Tables to publish

- ☑ Reviews
- ☑ Products
- ☐ Users

Login Front

- Click on the "login in" icon
- Follow the instructions on the "login page"
- Click on the "login" button"

Create an Account

- Click on the "login in" icon
- Click "create an account" button on the new page display
- Follow the instructions on the create an account page
- Click on the submit button

Requirements

- Linux OS (Any distribution)
- Working Magento 1.7+ Installation
- Java SE Runtime Environment 7 or newer

Payment and Checkout

- Click on the shopping cart button on the top right corner of the store.
- Check that you have selected the right products in their right quantities.
- If there is an error, click "update shopping cart" button else click "proceed to checkout" and follow the steps.

Add a product to shopping cart

- Click on the item you would like to buy.
- Type the quantity of the products you would like to buy.
- Click on "add to cart button"

Output URL

http://localhost/...   Open URL

Generate ⚙   Cancel
